Sealite Announces New Blue Flag LED Rail Light for the US Rail Market.

Tilton, New Hampshire, USA – December 2016 — Sealite launch its LED Rail Light, the most cost effective Blue Flag Signal LED Rail Light, built to withstand the toughest environments.

Designed to meet FRA Blue Light Code Regulations, Sealite's Rail Light is one of the most advanced in its class, with a single blue LED Optic for superior color and light output. Engineered to outlast traditional blue signal lights, the energy efficient Rail Light has an estimated autonomy of 8,000 hours (up to 2 years) on a single, 6-volt air alkaline battery and will stay brilliantly illuminated three times longer than any other blue flag safety light.

Exclusively for the U.S. railroad market, the Blue Flag LED Rail Light maximizes worker safety when maintaining rail cars and locomotives, adding or removing cars to passenger trains, or when inspections are being carried out. Simple operation and battery replacement have been engineered into the design of the Rail Light for minimal maintenance and ease of use.

The Rail Light has two large bottom magnets to provide maximum adherence to the train, while offering flexible positioning options. Whether used at the front of a train or horizontally on a car, the Blue Flag LED Rail Light will remain firmly and reliably in place, in all weather conditions. The rugged, injection molded, waterproof case is made from UV stabilized polycarbonate to insure operation and durability in challenging environments, climates and weather conditions.

Sealite's innovative Blue Flag LED Rail Light provides exceptional value for all companies who want to insure the safety of employees who work on, in and under trains.
